

INGENIUM FUNDS

USING EUROPEAN STRUCTURAL AND INVESTMENT
FUNDS TO CO-INVEST WITH BUSINESS ANGELS

ABOUT US

INGENIUM is a family of co-investment funds specialized in providing equity and business support in collaboration with business angels to knowledge-intensive companies in the very early stages of their journey. It fills the financing gap in several European regions by mobilizing both public and private resources. Public resources are usually equity or quasi-equity financial instruments from European Structural and Investment Funds administered by the Directorate General for Regional Policies of the European Commission.

Our goal is to stimulate the creation of knowledge intensive companies stemming from universities, research centres or regional innovation hubs. These companies are one of the main engines for knowledge intensive, "good to live in" regions.

INGENIUM funds are promoted by **META Ventures**, an investment company active in several European regions. META Ventures designed and implemented over €200M in venture capital to back knowledge-intensive startups acting as a catalyst for the European economy by disrupting industries and creating jobs.

PROVEN FORMULA

We are not just investors.

We partner with visionary innovators and business angels, the leading source of private seed money, and support every step of their journey with unrivalled experience, learning resources and an extensive network.

€200M+

**INVESTED IN SCIENCE
BASED STARTUPS**

that act as a catalyst for the European economy by disrupting industries and creating employment opportunities.

MEET SOME OF OUR STARTUPS

It's not just about generating strong financial returns. The start-ups we invest in are carefully selected in collaboration with business angels to respond to the most pressing challenges facing our society and to generate a concrete impact.

ANGIODROID

Angiodroid developed an innovative medical product for angiography that avoids the use of iodine as a contrast agent using an injection of CO2 gas instead.
